| <b>Subject:</b>     | Themes :: Support for Themable component resources   |                     |                           |
| <b>Description:</b> | Support for themable component support isn't available. Actually, the resource can have templates but they don't support themes. Thus, when changing the layout of a page the user must hard code some component changes which isn't good at all.<br><br>This should be available so we make a really nice public release. |                     |                           |

### History

---

**12/07/2009 07:43 PM - Marcelo Coraça de Freitas**

- Status changed from New to Accepted

as this is very important for the implementation of the kvdriver utility and other tasks (such as packaging web applications into zip files and stuff), I'm going to spend some time brainstorming on this.

**03/03/2010 02:43 PM - Marcelo Coraça de Freitas**

- Status changed from Accepted to New

- Priority changed from Alto to Baixo

I haven't really had the time to work on this and it's not a high priority task at all! It's just a nice feature to have in the framework.. gonna work on this in a few months.
